

New Gutter Checklist

If you're considering installing new gutters or replacing old ones, here's a quick checklist to make sure you get the best results:

Gutter Material

- Aluminum, steel, copper, or vinyl? Choose based on durability, budget, and aesthetics.

Gutter Size

- Consider your roof size and local rainfall. Larger gutters handle more water.

Downspout Placement

- Proper placement ensures water flows away from the foundation and prevents erosion.

Slope and Alignment

- Gutters must be angled slightly toward downspouts for optimal water flow.

Leaf Guards

- Consider guards or screens to reduce clogging and maintenance.

Professional Installation

- Ensure the gutters are securely attached and sealed to prevent leaks.

Warranty

- Check manufacturer and installer warranties for long-term protection.
